

FOR IMMEDIATE RELEASE

lotus PRO Partners With NSS and RPS Corporation To Get Inside Commercial And Industrial Floor Cleaning Equipment Market.

Tersano Head Office, Windsor ON: October 11, 2011. lotus® PRO inventor and Tersano Inc. President Steve Hengsperger announced the signing of new technology partnerships with two world leaders in commercial cleaning equipment today. Inking licensed technology deals with Zer03 brand manufacturer RPS Corporation of Racine Wisconsin, and NSS of Toledo Ohio, Tersano announced shipment to both companies of pre-production units of it's new on-board Aqueous Ozone module. Final field testing in hard surface floor cleaning machines is to begin starting immediately, with full commercial production scheduled for 2012.

The module lets RPS and NSS 'build-in' lotus PRO technology when they assemble or retrofit their machines, so these machines can use ordinary tap water to produce Aqueous Ozone (AO) on-demand and on-the spot. Featuring compact low voltage technology that can be fitted to virtually any machine that uses water, the new lotus PRO module delivers sanitizing-strength Aqueous Ozone near the spray heads for maximum cleaning and germ-killing power. With a minimum of 1.25 PPMs of sanitizing-strength, the AO produced is an approved, proven and powerful natural cleaner that doesn't require costly, toxic chemicals or time-consuming rinsing.

Joining Hengsperger in the announcement was NSS Vice President of Sales Dale Krausnick who said, "Our company has come a long way since we started up in 1911 as one of the first commercial vacuum cleaner companies on the world. Now we're leading in green commercial cleaning to keep pace with demand from regulators and customers alike. With lotus PRO technology built right into our floor care equipment, we offer a 1-2-3 combo of chemical-free green, unparalleled clean and no rinsing in between."

"RPS is excited to incorporate lotus PRO technology into our ZerO3 line of green cleaning equipment. When considering all the producing, packaging, shipping and hazards with chemicals, we've found they just don't compare to lotus PRO's Aqueous Ozone technology. Now with lotus PRO on board, ZerO3 customers save money and the environment, and get super-clean with sanitizing power unavailable previously." Added RPS President Sean Goff.

The same way Intel® has core technology arrangements with top manufacturers of computers, Tersano is now also forming arrangements with the top one or two leaders in other areas of commercial and industrial cleaning. "With our hard-surface floor deals in place with NSS and RPS, we're working on similar partnerships and life-testing with manufacturers of laundry equipment, carpet and upholstery cleaners, glass and tile cleaners, any high quality equipment maker who wants to offer effective chemical-free cleaning as an option." Said Hengsperger.

Tersano is actively pursuing other potential partnerships with cleaning industry players and looks forward to announcing at least one more major deal prior to ISSA/InterClean in Las Vegas USA starting October 18, 2011.

Tersano Inc. is a privately held innovations company based in Windsor, Ontario with offices and distribution centers throughout the United States. The company develops and manufactures lotus® and lotus® PRO products for consumer and commercial customers worldwide, as well as licensed technology for cleaning equipment manufacturers. The company is committed to advancing environmentally safe and healthy cleaning and sanitizing technologies for a safer and greener world.
