

**Tersano Storms the Commercial Market with its New lotus<sup>®</sup> PRO Cleaning System**  
*Chemical-free Cleaning, Sanitizing, Deodorizing and Stain-Fighting Agent Expands into Commercial Sale following its Success in the Consumer Market*

**ONTARIO, CANADA – (September 2, 2008)** - Tersano, a company dedicated to changing the way we think about cleaning chemicals, today announced that it has begun working with major distributors across the country to offer its popular lotus<sup>®</sup> brand chemical-free cleaning, sanitizing, deodorizing and stain-fighting solution for commercial use. The lotus<sup>®</sup> Professional Cleaning System delivers the same sanitizing power of its consumer counterpart and presents schools, hotels, restaurants, retirement homes and other businesses and organizations with a cost-effective and chemical-free alternative to other cleaners on the market.

“The lotus Professional Cleaning System is an EPA-registered substitute for multiple chemical-based cleaners in a professional setting,” remarked Steve Hengsperger, president of Tersano. “The product excels as a cleaner, sanitizer, deodorizer and stain-fighter so commercial clients will be able to utilize its versatility, eliminating the need for multiple cleaners. It also provides a safer cleaning solution than wasteful and potentially harmful chemical-based products already on the market.”

The lotus system’s patented Oxyshield™ process turns ordinary tap water into a powerfully effective, yet harmless sanitizing agent. Water that is oxygenated with the lotus system is 50% stronger and 3,000 times faster than bleach as a cleaner, yet is safe enough for contact with a baby’s skin. It removes 99.99% of all toxins, germs, and bacteria on surfaces and objects.

A recent third-party test performed by the Toxics Use Reduction Institute (TURI) found that the lotus Professional Cleaning System is more effective and safer than the two leading commercial cleaning products. Additionally, the lotus system is much more cost-effective than regular cleaners.

“While conventional products might cost end users anywhere from 6 to 30 cents per bottle, the lotus system only costs about two and a half cents per bottle,” said Hengsperger.

Tersano will be showing its new lotus<sup>®</sup> Professional Cleaning System at booth 1325 of ISSA/INTERCLEAN<sup>®</sup> North America, taking place September 8-11 in Las Vegas, Nevada.

The lotus<sup>®</sup> Professional Cleaning System will be available for purchase in November. For more information regarding this and Tersano’s other lotus brand products, please visit: [www.tersanoprofessional.com](http://www.tersanoprofessional.com).

**Tersano Inc. is a privately held innovations company based in Windsor, Ontario, with offices and distribution centers throughout the U.S.A. The company develops and manufactures lotus<sup>®</sup> and lotus<sup>®</sup> PRO products for consumer and commercial customers worldwide.
